Astm a240 specification pdf

astm a240 430 (s43000) stainless steel plate astm a240 specific standard for chrome and chromo-nickel stainless steel plate, sheet and strip for pressure vessels and for general applications complementary technology: hic test | nace mr0175 | z15 | z25 | z35 | s1 | s2| gangsteel is specialized in the supply of steel plate a240 a240 in a240 430. our gangsteel has stock size of minimum 6000ns for each size stainless steel, we also have the cutting factory which could cut the stainless component according to our customer requirement. Contact us by email admin@gangsteel.com if you need stainless steel material. for more information about stainless steel plates astm a240 430, check them in the following way: chemical composition grade astm a240 430 the max element (%) c mn p s cr ni astm a240 430 0.12 1.0 0.040 0.030 1.0 16.0-18.0 mo n cu cb ti w our gangsteel provide equipment to control width, length, thickness and delivery We promise no great tolerance, no fake material, better service, competitive price. degree astm a240 430 mechanical properties of traction elongation resistance. max astm a240 430 min mpa mpa mpa min % brinell rockwell b 205 450 22% 183 89 steel plate for shipbuilding alloy steel plate high strength stationery, carbon steel plate| safety situation on productSITUATION If you have a question, please contact us by email admin@gangsteel.com Type 304 Stainless steel is the most widely used of austenitic stainless steels (chrome/nickel). In the ricotta condition it is essentially non-magnetic and becomes slightly magnetic with the application of cold work. Type 304L Stainless steel is preferred in welding applications to exclude chromium carbide formation during cooling in the region affected by welding heat. These alloys are an excellent combination of corrosion and manufacturing resistance. Product Shapes: Packaging, StripsSpecific: Type 304 – ASTM A240, ASTM A666, AMS 5513 Type 304L – ASTM A240, ASTM A666, AMS 5511Applications Type: Chemical equipment and pipes, heat exchangers components, equipment for handling dairy and food and utensils, cryogenic vessels and components, architectural and structural applications exposed to non-marine atmospheres Chemical composition: (For ASTM A240)ElementType 304Type 304LCarbon0.07Max0.030MaxSulfur0.030 Max0.030 MaxPhosphorus0.045 Max0.045 MaxSilicon0.75 Max0.75 MaxChromium17.5 to 19.518.0 to 20.0Nickel8.0 to 10.58.0 to 12.0Nitrogen0.10 Max0.10 Mechanics (For ASTM A240, A666)TypeYield Strength 0.2% offset Resistance (microohms – cm) to 700F72Sharm of cutting points (oF) 2550 to 2650Respect for oxidation – Continuous service(oF) 1.650Oxidation Resistance – Intermittent Service(oF) 1.500Procedure: Types 304 and 304L cannot be hardened by heat treatment. Annealing: Heat at 1850o F at 2050 or F and cool at sufficiently high speeds through 1500 F at 800oF to avoid precipitation of chrome carbides. stress relief Annealing: Cold-worked parts should be stressed at 750o F for 1/2 to 2 hours. Forming:Annealed Types 304 and 304L can be manufactured from roller forming, deep design, bending and most other manufacturing techniques. Due to the high hardening rate of the work of these materials, intermediate anneals perhaps required to successfully manufacture the part. Welding:Types 304 and 304L are weldable by most casting or resistance welding techniques. If the filling metal is required, the type 308 is normally used. Type 304L should be used in heavier sections to reduce the occurrence of carbide precipitation in the region affected by the heat adjacent to the welding poolCorrosion: Types 304 and 304L provides corrosion resistance in a wide range of moderately oxidizing andconditions, fresh water and non-marine applications.
